

Use this sheet to make the floor of the train carriage by joining the three pieces together (1,2 and 3 as in the diagram above) using glue or sellotape.

This forms the floor of the train.

Once you have designed what you want to put inside the train carriage, items such as areas for seating, tables, luggage baby buggies etc, place them on the carriage floor plan in the position you require them. You may also want to include items such as information screens, bicycles etc.

It's your design! So if you think about anything you feel the public would like to see on a train carriage, include them in your ideas.
